

Let's Grow Greener

At G&B Organics, we understand that gardeners are looking for products that are organic to get beautiful blooms and bountiful crops.

We also know that gardeners are looking for products that are kind to families, pets, and the environment.

We've dedicated ourselves to meeting the needs of gardeners by using the finest organic ingredients to make ours the label that gardeners trust.

Whether it's a backyard garden retreat or a patio garden in the middle of the city, our organic products help gardeners everywhere grow their gardens to their absolute best potential.

Family Owned

G&B Organics has been family owned and operated for three generations, since 1925.

Locally Made

At G&B Organics, we're always looking for ways to source ingredients and produce our products as locally as possible for our customers. This reflects our commitment to sustainability, and to investing in local economies and businesses whenever possible.

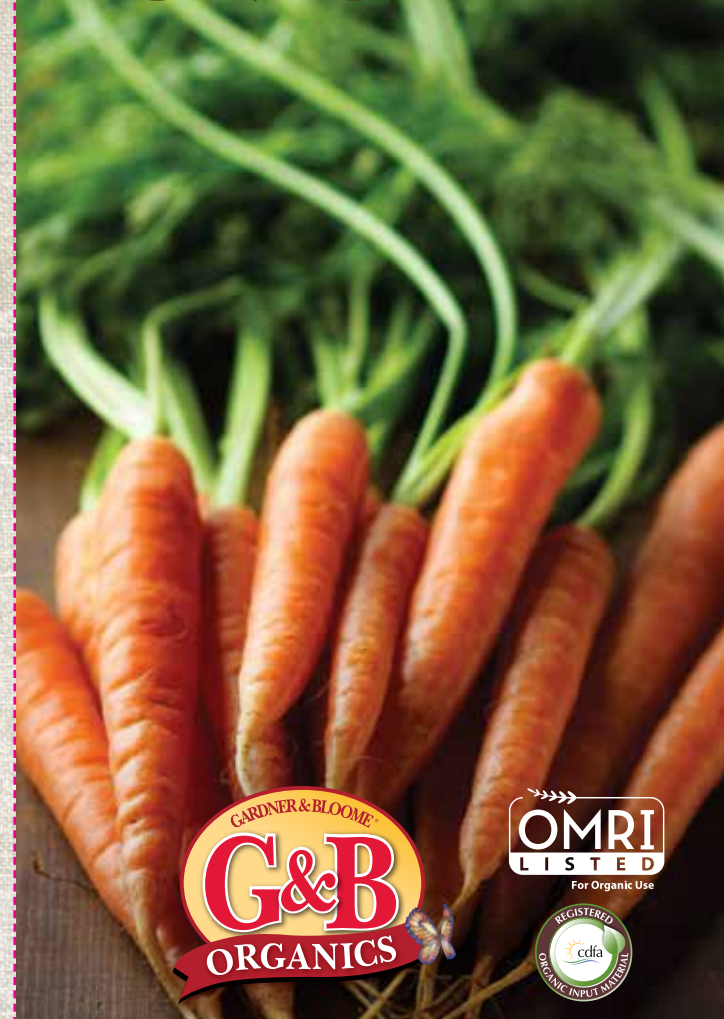

People, Pet & Planet Safe

Although obviously not a food product, our products are safe for kids and pets to be in contact with immediately. And because they promote a healthy soil structure, they can reduce run-off and improve environmental health as well.

An Organic Education
Let's Talk Organics

What exactly is organic?

THEN

The definition of organic has evolved over time.

When we started our family-owned business almost 90 years ago, organic simply meant “plant or animal by-product”.

NOW

Today, the USDA's National Organic Program standards are hundreds of pages thick.

Put simply, organic products are defined as those containing ingredients, free from:

- Genetically modified organisms
- Synthetic pesticides
- All harmful synthetic chemicals

TOMORROW

At G&B Organics, we are always at the forefront of organic innovation.

We work directly with leading organic innovators and scientists to make sure we're delivering maximum value to our consumer of organic products.

Why is organic important?

Simple & effective

- Hassle-free—no need to don chemical gloves, goggles, or other safety gear in order to work in your garden.
- It's the natural approach—mimics the process for growing plants that has existed for millennia.

Peace of mind

- Promotes life within the soil, encouraging the growth of beneficial microbes that maximize plant health—organically.
- People, pet, & planet safe—although obviously not a food product, our products are safe for people and animals to be in contact with immediately. They are environmentally safe, as well.

Positive impact

- Helps promote the health of vital natural resources, like our air and waterways.
- Produced using fewer fossil fuels than conventional alternatives.
- Promotes the use of recycled & repurposed materials that minimize the impact to landfills.

How do I know it's organic?

Look for G&B Organics brand soils & fertilizers

- Anywhere you see G&B Organics brand soils and fertilizers, you can be sure you're looking at a product that is 100% organic.
- Every OMRI Listed G&B Organics ingredient, production process, and facility has been verified as compliant with federal organic standards.

Our ingredient integrity

- Our ingredient lists are comprised of things you can pronounce.
- All label claims on all G&B Organics products have been externally verified.

Look for the OMRI and OIM logos on G&B Organics products

- The Organic Materials Review Institute (OMRI) is the leading non-profit, internationally recognized third party accreditor of the USDA's National Organic Program.
- OMRI verifies all ingredient and label claim validity, manufacturing process compliance, and public health & safety standards.
- The Organic Input Material (OIM) listing is the California Department of Food and Agriculture's approval of meeting their stringent requirements for producing organic materials. Look for the OIM logo on all our soils and blended fertilizers.
